

Mercury Equatorial Site

The Ecuadorian Space Agency offers Ground Station services for parties interested in establishing communications and observation equipment at the planetary equatorial line.

Location

Mercury Equatorial Site is located in the Santa Elena Province in the Pacific Coast of Ecuador with 110 ha dedicated to building and operation.

Power

The land plot takes a direct power line from one of the main national electricity backbones.

Security

A police academy with a 300 strong garrison lies 5 minutes away, and the service includes 24/7 dedicated armed guards.

Government Support

Tariff discounts, tax reductions, and an investment-friendly and flexible RF legislation.

Internet

Two redundant and provider- separate dedicated fiber optic lines ensure constant and consistent connectivity.

Environment

The land plot lies in a dry, arid region 90m above sea level and away from tectonically active areas located in a rural area.

Financing

The standard contract is fixed rent without initial investment. We invest in infrastructure so you don't have to.
